

## The corporate introduction videos (English) have been released.

We have released four types of videos, which introduce our company and our plants (Itabashi Plant, Gifu Plant, Fukushima plant).

In the videos, we introduce the various highly value-added products provided by our unique plastic working technology and the new challenges we are working on for the near future.

Also, in addition to explaining each product and its manufacturing processes at each of our plants by referring to the technical appeal points and major applications, you can feel familiarize yourself with the high technical capabilities.
